

Workplace register

Workplace register is a module of the application ID system. It uses people identification by a contactless card or by a chip. The module registers assignments of operators to workplaces on a production line.

- ${\ensuremath{\boxtimes}}$ Terminals are operated by a touch screen, without
- a necessity to use a keyboard.
- Touching the touchscreen, an operator selects a workplace and by a reading of the chip card the work is started.
- A login to the workplace automatically terminates his login on a previous workplace.
- \bigcirc A login to the workplace can be conditioned, for example by a valid training or by a valid ESD test.
- Using the terminal, the operator confirms (signs) a document of an attended training.
